

Bot Facebook

Am instalat librariile:

```
pip3 install Flask==0.12.2
pip3 install pymessenger==0.0.7.0
```

Codul folosit:

[illegible]

```

        send_message(recipient_id, response_sent_nontext)
    return "Message Processed"

def verify_fb_token(token_sent):
    if token_sent == VERIFY_TOKEN:
        return request.args.get("hub.challenge")
    return 'Invalid verification token'

def get_message():
    sample_responses = ["You are stunning!", "We're proud of you.", "Keep on being you!",
                        "We're grateful to know you :)"]

    return random.choice(sample_responses)

def send_message(recipient_id, response):
    bot.send_text_message(recipient_id, response)
    return "success"

if __name__ == "__main__":
    app.run()

```

Cand ii dau run imi deschide o pagina creata prin cod:

Am creat o pagina de facebook, apoi am creat un cont de facebook developer unde am legat pagina de facebook creata de cont:

Access Tokens

Create New Page

Generate a Page access token to start using the platform APIs. You will be able to generate an access token for a Page if:

1. You are one of the Page admins, and
2. The app has been granted the Page's permission to manage and access Page conversations in Messenger.

Note: If your app is in dev mode, you can still generate a token but will only be able to access people who manage the app or Page.

Pages	Tokens
<div> Test3 101030605420499</div>	<div>—</div> <div>Generate Token</div>

Add or Remove Pages

Webhooks

To receive messages and other events sent by Messenger users, the app should enable webhooks integration.

Add Callback URL

Am generat o cheie unica pentru bot:

Token Generated

 Test3
101030605420499

To protect your security, ONLY share this token with app developers you trust.

This token will only be shown once, so keep it safe. If it gets lost, you'll need to create a new one. Anyone could potentially use this token to impersonate this page, depending on the privacy settings of your app. If you wish to revoke all previously generated tokens from a page, you can remove this page from the app using the button below the table.

Done

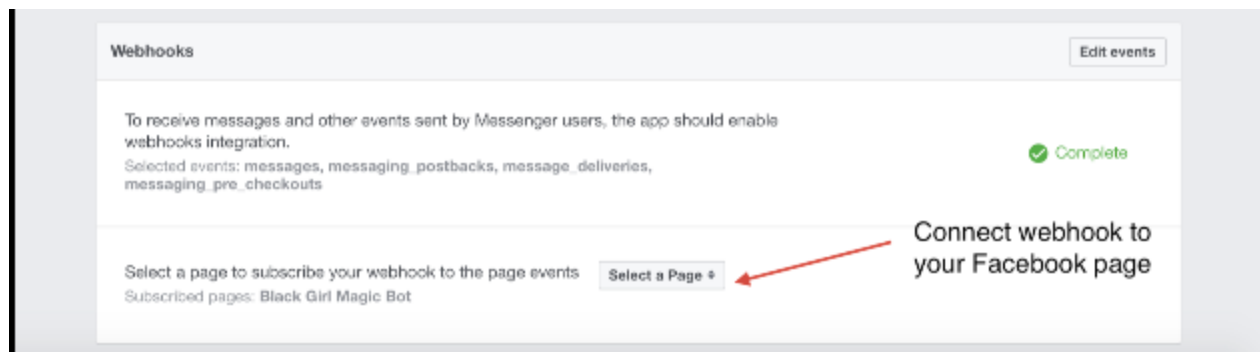

Am descarcat si instalat ngrok pentru hosting:

```
C:\Users\student\Desktop\ngrok.exe - ngrok.exe http 5000
ngrok by @inconshreveable (Ctrl+C to quit)

Session Status      online
Session Expires    1 hour, 59 minutes
Version             2.3.38
Region              United States (us)
Web Interface        http://127.0.0.1:4040
Forwarding           http://eab3ef1303d2.ngrok.io -> http://localhost:5000
                    https://eab3ef1303d2.ngrok.io -> http://localhost:5000

Connections         ttl    opn    rt1    rt5    p50    p90
                   0      0      0.00   0.00   0.00   0.00
```

Am introdus cheia si un callback url creat de ngrok
